

Specifications:

*The electronic counting machine is mostly used in the citrus and soft fruit industry.
The product is slightly elevated in soft rubber cups, to assure the product does not get damaged.
The fruit is singulated for accurate counting, it then passes the counting point which is controlled by laser beams. When the designated amount is reached, the track comes to a full stop and waits for the machine to dump the product before it starts counting again.
The electronic counting machine is chain driven to compliment low-maintenance costs.
This productive machine can handle up to 28 bags per minute.*
