

## *Specifications:*

*The Soft Bin Tipper is one of our latest inventions and is extremely competitive in the industry. This unique machine can handle all bin sizes including half bins.*

*The Full bins enter the tipper via a chain driven in feed conveyor system; it's then lifted against a PVC belt conveyor and rotated 130 degrees. The full bin then pushes out, tipping the product softly onto the exit conveyor system. The empty bin is then pulled back into the rotating unit and rotated back to its original position.*
